

At Home

Convert to LED light bulbs. Lower electric bills = lower pollution.
#pollutionresolution

Burn dry, seasoned wood in my woodstove. Wet wood generates less heat and more harmful smoke. #pollutionresolution

Prepare more homemade meals. Whole food waste decomposes quicker than pre-packaged "heat and eats". #pollutionresolution

Pump my septic tank. A maintained septic system can reduce bacteria in my drinking water. #pollutionresolution

At Work

Close my dumpster lid. Rainwater combines with trash, then drains out the bottom finding its way into my river. #pollutionresolution

Sweep my parking lot once a month. Stormwater carries bacteria, trash, and chemicals from the ground to my river. #pollutionresolution

Use low VOC products. Many products contain chemicals that may have adverse health and environmental effects. #pollutionresolution

On the Road

Bring a bag when I shop. Plastic bags are used once but take centuries to decompose. They're no longer worth my time. #pollutionresolution

Pump gas at night. Refueling emits vapors reactive to sunlight forming harmful Ground-level Ozone. #pollutionresolution

Get a tune up. A properly maintained engine reduces emissions and increases gas mileage. #pollutionresolution

In the Community

Volunteer to plant trees with [@CacaponInst](#). Trees clean our air and our water.
#pollutionresolution

Become a member of a conservation or environmental group. Meet new people while improving my environment. #pollutionresolution

Form a Care for Creation group. Guide my congregation to share in earth-keeping activities and cherish creation. #pollutionresolution

In the Yard

Pick up my pet's poop. Stormwater carries bacteria from the ground to my river. #pollutionresolution

Establish a No-Mow Zone near my stream or pond. Vegetated buffers reduce contaminants entering your waterway. #pollutionresolution

Aerate my lawn. Aeration softens the ground, absorbing more rain, and reducing runoff into our creeks and streams. #pollutionresolution

On the Farm

Test My Soil. Crop fields may contain enough nutrients for this year's crop. Less fertilizer = Less pollution. #pollutionresolution

Apply Cover crops. Nitrogen fixing vegetation replaces nutrients while reducing wind and rain erosion. #pollutionresolution

Install a Riparian Buffer. Stabilizing Stream banks limits bank erosion and preserves agricultural soil. #pollutionresolution
